

RADIATION SAFETY MANAGEMENT

All detectors. One platform.

DoziView brings radiation detector data into one unified platform, monitors device operation, activates alarms, visualises data on maps and generates auditable reports.

Live map, detector status and active alarms in one operator view.

LIVE MONITORING

MAPS AND MULTI-SITE MANAGEMENT

ALARMS, HISTORY AND CHARTS

WORD AND PDF REPORTS

Live detector monitoring

- A simultaneous overview of all connected detectors.
- Live reading and measurement unit for every sensor.
- Statuses: normal, warning and alarm.

Multi-site and map management

- Sites, buildings, floors and monitored zones.
- Flexible assignment of detectors to locations.
- Critical conditions are immediately visible on the map.

Alarm and event management

- Automatic activation according to configured thresholds.
- Time, device, location and threshold exceedance level.
- Operator acknowledgements, comments and a complete event history.

Measurement history and charts

- Time-series data, trends and detector comparisons.
- Incident analysis using data from before and after an alarm.
- Significant increases and critical moments are easy to identify.

From detector to auditable report

Flexible architecture for local and centralised radiation monitoring

DoziView

RADIATION MONITORING

UNIFIED DATA FLOW

Centralised system architecture

CORE CAPABILITIES

- 1 Connect detectors**
DoziView receives data from serial, TCP/IP and network devices through an extensible driver architecture.
- 2 Monitor every location**
The operator view displays sites, buildings, floors, zones, detector statuses and current measurement values.
- 3 Respond to alarms**
The system records threshold exceedance, alarm start and end times, the device, its location and operator actions.
- 4 Analyse history**
Time-series data, charts and event records support analysis of incidents, trends and measurements before and after an alarm.
- 5 Create editable reports**
Select a period and detectors, include tables, charts and total-dose summaries, and produce an editable DOCX or final PDF.

What makes DoziView valuable?

- Centralised radiation monitoring across the facility.
- A unified history of alarms and operator actions.
- Auditability and consistent, high-quality reporting.
- Flexible database deployment: SQLite or PostgreSQL.
- Adaptable and extensible driver architecture.
- Professional web operator interface.

Key benefits

Faster response

Critical conditions are visible immediately.

Clear accountability

Operator acknowledgements and comments are recorded.

Simpler audits

A unified and verifiable history of events and data.

Less manual work

Automated data collection and reporting.

Flexible integration

Adaptable to the existing network infrastructure.

Extensible system

New detectors and protocols can be added.

Request a demonstration

See DoziView in operation and assess integration options for your facility.
